

CP1 Presentation Requirements EXE101SU26
(Thanhntl2)

Duration: 15 minutes + 5 minutes Q&A

Location: In-person at NVH

Presentation Slot Sign-up: Link will be sent to leaders in Slack for Leaders Only. Team leader will book 1 slot for the entire team

Deadline for Submission: **BEFORE PRESENTATION SLOT in Week 3**

Submission Link: <https://forms.gle/7XNnyuj5AmqaQ6fY8>

Presentation Content:

1. Startup's Profile (1 page of the slide)
 - 1.1. What is your start-up/team's name? What does your start-up/team's name mean?
 - 1.2. Startup's composition: Names + Roles + Responsibilities
 - 1.2.1. Tell me all the names of your team members
 - 1.2.2. Each member must have a specific role
 - 1.2.3. Each role will have certain responsibilities, tell me what those are
 - 1.2.4. **Note: The team must have a minimum of 4 students and a maximum of 6 students. Two different majors or specializations are required. Not satisfying these requirements may result in immediate failure of the EXE101 course.** I recommend 2 IT majors/specializations to be in the team so there is someone to code your product in EXE201.
 - 1.3. What are your startup's values?
 - 1.3.1. These values are your guidance to do EVERYTHING in this startup. Tell me what you and your team believe as your values in beginning this startup. These should be the HARD things to do, not the soft things you can easily achieve.
2. Startup idea: **MINIMUM 2 ideas**. Maximum 6 ideas (**1 table for each idea**)
 - 2.1. The team can choose to present 2 ideas or anywhere between 2-6 ideas with 6 is the maximum amount of ideas. No extra time will be given for presenting more ideas. No extra credit will be given for more ideas. This is entirely up to the team to choose how many ideas you will present.
 - 2.2. **IMPORTANT** Each idea must satisfy two basic aspects: Innovation; IT-related.
 - 2.2.1. These should be shown throughout the table below.
 - 2.3. Tell me what the idea is and **for each idea**, provide your idea assessment for the following 6 key dimensions. BE CONCISE, NOT LENGTHY:

What is the Job-to-be-done here? Rather than tell me what the product is, tell me what someone wants or needs or desires to be done by themselves or done for them? In what specific instance/case? No need for the “why” here.		
Idea Description What are you doing to complete the Job-to-be-done above? What product/service are you proposing?		
Key dimension	Idea assessment for key dimension	Assessment rating (Low-Med-High)
Desirability	Describe the people having the Job-to-be-done above. In which frequency will they use your product/service?	
Feasibility	What exactly are we offering customers? Can we build it? Any other risks?	
Viability	How big is the market? How do we make money? How do we go to market?	
Suitability	How does it fit with our competencies?	
Capability	Do we have the right people for it? Do we need external resources?	
AI Proof	Can this idea be replaced by any current AI model/application? Can it be easily replaced in the future by AI? If an AI company/producer wants to reproduce the same product as yours, do they need to ask for your permission (this means you will have Intellectual Rights for your products)?	

2.3.1. Desirability

- 2.3.1.1. Low rating: Customer is not defined; Frequency is minimal or customer can go without.
- 2.3.1.2. Med rating: Customer definition is specific but maybe hard to pin point; Frequency is moderate or customer can go without for a while but eventually will.
- 2.3.1.3. High rating: Customer definition is specific with well defined boundaries; Frequency is large or customer cannot go without.

2.3.2. Feasibility

- 2.3.2.1. Low rating: Offer is poorly defined; offer may not be technically doable (no existing solutions); regulatory or infrastructure risks pose fundamental challenges

2.3.2.2. Med rating: Offer is partially defined; technical risks may be significant; regulatory or infrastructure risks may be an issue

2.3.2.3. High rating: Offer is well-defined; technical risks are manageable based on existing solutions; regulatory or infrastructure risks are manageable

2.3.3. Viability

2.3.3.1. Low rating: Market is too small; competition leaves no room to enter; business model is inappropriate; no defined customers/channel

2.3.3.2. Med rating: Market is not large enough; competition is significant; business model is questionable; customers are in question

2.3.3.3. High rating: Market is large with good dynamics; competition leaves room to enter; business model is suitable; customers are defined

2.3.4. Suitability

2.3.4.1. Low rating: It does not fit any of the team members' expertises

2.3.4.2. Med rating: It fit some of the team members' expertises

2.3.4.3. High rating: It fit most of the team members' expertises

2.3.5. Capability

2.3.5.1. Low rating: Team does not has the skills to build this & has minimal motivation

2.3.5.2. Med rating: Team capability & motivation are questionable

2.3.5.3. High rating: Team has the skills to build this or external resources can be hired. Team motivation is high

2.3.6. AI proof

2.3.6.1. Low rating: Idea can easily be replaced by current AI model/application. There is not a feasibility of getting an Intellectual Right registration for your product.

2.3.6.2. Med rating: Idea is not easily replaceable by current AI model/application but may be easier with future AI development. Feasibility of Intellectual Right registration is in question (50-50).

2.3.6.3. High rating: Idea has proprietary technology, difficult to replicate technology, future AI cannot replace without permission (you have Intellectual Rights Protection).

2.3.7. **Note: low ratings DO NOT mean the idea is “bad”, these ratings only give you a personal judgement of the level of difficulty it could be when you attempt such ideas. It does not mean you cannot proceed with a lowly rated idea.**

3. AI disclosure statement (should be your last page of the slide, no presentation).

[Lecturer's Recommendation] Project management platform: Trello, Lark, etc. This help teams track work and keep deadlines and allocation of workloads

[Lecturer's Recommendation] Product management platform: Linear, etc. This helps the Dev team manage work when developing products and track progress.

[Lecturer's Recommendation] Communication platform: Slack, Discord, etc. This helps the team communicate efficiently and does not miss important messages.

Important: I encourage you to DREAM the dream you wanted, so please do not shy away from doing something big or something too much for you to achieve now. This course, EXE101, is here for you to try so try anything.

HARD THINGS ARE THINGS WORTH DOING ;)

Lecturer's policies:

1. If you believe doing something else beside/in replacement of the guidance I have given you for each Checkpoint is better, DO IT! Keep in mind that some explanation needs to be given for your choice so let me know of your reasoning.
2. All work must be completed by team members: copying or replicating or hiring any other current/past team's work or someone else to do your work will result in a score of ZERO & failure of EXE101 course. Any team member who does not contribute or does not contribute fully on their agreed assigned parts will receive a score of ZERO or a reduction to all checkpoint grades at the end of the semester.
3. Late submission equates to a score of ZERO for the entirety of the submitted work.
4. **AI uses & help are allowed; however,**

Be aware:

- Do NOT trust anything it says. Facts from AI tools can be taken from various sources, some of which are Wiki (Wikipedia is the largest of them). These Wiki sources are editable by ANYONE, so check the authenticity of the source.
- **AI uses' disclosure:** Please include a disclosure statement (a short paragraph) at the end of the presentation and/or report explaining what you used the AI for and what prompts you used to get the results. Failure to include this statement will result in a failing grade for the assignment.
- There are **pass/fail critical-thinking questions** during the presentation of the submitted materials. If the student cannot answer these questions sufficiently, the student will receive a failing grade for the assignment and have to resubmit & represent at a later time.

[Recommendation] Pass/fail critical-thinking questions practice tool: [ChatGPT-Chat with your document](#)

5. Presentation's attendance: All team members are required to be present. Team members who do not attend the presentation receive 50% of the team's score unless provided acceptable reasons for absence with proof (email to thanhntl2@fe.edu.vn). Students should NEVER take a leave of absence in any other class to attend EXE101 checkpoints presentation.
6. Before asking me (your lecturer) to make an exception for you, ask yourself this question first: "Is it impossible to honor my commitment, I mean truly impossible?". If the answer is YES, I am willing to hear your explanation. If the answer is NO, my answer is NO.
